

CURRICULUM VITAE

Kirk J. Staggs

84-Retired Lawrence Livermore National Laboratory, Livermore, CA

From 1981-1984 I worked as a contractor at Lawrence Livermore National Laboratory (LLNL) employed by Butler Service Group out of Sunnyvale, Ca. Between 1984 and 2007 I work as a Department of Energy (DOE) contractor employed by the University of California and from 2007 until I retired I worked as a DOE contractor for Lawrence Livermore National Laboratories (LLNS).

Between 1981 and 2004 I conducted fire testing and safety analysis for various DOE programs I conducted small and large-scale fire experiments to evaluate and determine the performance of materials, fire models, energized and un-energized electrical wires and cables, building and ventilation systems, and fire management systems (fire detectors, sprinkler systems, etc.). I also performed training of fire fighters and testing personal protection equipment. I have written Operations Procedures, Operational Safety Procedures, Facility Safety Procedures, National Environmental Protection Act documents, project proposals, test plans, and reports.

From 1997 to 2006 I supported the Yucca Mountain Program, continued to conduct fire testing, and conducted fire hazard analysis for nuclear weapon systems and DOE waste facilities. My duties associated with the Yucca Mountain Program involved the design, fabrication, and setup of materials testing and analysis related to the corrosion of various metal alloys. I provided similar support to the National Ignition Facility (NIF) laser program.

Between 2006 and 2010 I worked for the NIF project as an inspector for electrical assemblies, wire harness, electrical cables, and clean room certifications. I changed the NIF electrical standards for wire and cables from unique DOE specifications to industrial standards and specified electrical testing standards for cable and harness assemblies. I also perform inspection of large optics used in the NIF beam lines.

77-80 Ed Chovanes Ford, San Leandro, Ca.

I worked in the new car department as a utility/installer technician receiving and preparing new cars for delivery.

My duties included the fueling and de-fueling, troubleshooting, inspection, adjustment, power turn-up, and scheduled and unscheduled maintenance of jet aircraft. I was a supervisor, training petty officer, safety petty officer, and ground turn-up NATOPS instructor.

EDUCATION

- Certificate in Fire Protection Engineering from UC Davis, 1998
- Chabot College, Hayward, CA; AA degrees in Electronic and Computer Technology, 1983
- U.S. Navy, Millington, Tenn.; Aviation Machinist Mate Jet (A) School, 1974
- Livermore High School, Livermore, CA; Graduated in 1973

CONSULTING WORK EXPERIENCE

81-Present Consultant, Livermore, Ca.

My consulting services involve all aspects of testing (designing, coordinating, fabricating, and operations) related to fire, explosions, and equipment performance and failure. I provide analysis of test and accident data in determining probable cause and origin of fire or explosion. In addition, I provide analysis in fire spread, damage patterns, material failure, equipment failure, and fire management systems. I also provide computer generate graphics of data (graphs, tables, etc.) and drawings for analysis, deposition, and court room presentations, and reports.

I setup, calibrate, and operate computer based data acquisition systems, flux meters, temperature sensors, load cells, flow meters, torque meters, RPM meters, optical meters, video equipment, electrical equipment, and other types of analog and digital sensors and equipment.

I have conducted inspections to determine the cause and origin of fires involving single and multiunit dwellings, commercial and industrial building and/or complexes, gas and electrically powered vehicles, and a private substation. I have also conducted fire inspections of domestic, commercial, and industrial electrical and/or electrical mechanical equipment and components.

I have studied and tested fire related events involving aircraft, automobiles, electrical equipment, batteries, wiring, buildings, building material, and propellants. I have worked on accidents involving fire, smoke, explosions, electrical arcing, electrical over-load, static discharge, welding, piloted ignitions, smoking materials, oxidizers, corrosion, and other nonspecific fire causes.

I have conducted compliance reviews to determine if electrical equipment, buildings, and systems are in compliance with various codes and standards. I have given depositions and testimony related to the examination of evidence, experimental and testing, cause and origin of the fire, damage patterns, and equipment failure.

81-Present **Depositions and Testimony related to Consulting**

Rossmore v Club Car; Deposition, Walnut Creek Ca. 1986

Johnson v Sierra Spring; Deposition, Sacramento, Ca. 1994

Alan Bell v. Cacao; Deposition and Expert Testimony, San Jose, Ca. 1997

Safeco/George v. Hydro-Quip; Deposition, Sacramento, Ca. 2000

Lockheed Martin v. RFI Supply; Deposition, San Francisco, Ca 2002

Travelers Property Casualty Insurance v. EZGO; Deposition, Santa Barbara, Ca 2007

Publications, Reports, and Presentations

Norman Alvares, Harry Hasegawa, and Kirk Staggs, "Ignition, Heat Release Rate and Suppression of Elastomeric Materials", present at 6th International Symposium on Tunnel Safety & Security (ISTSS) 12-14 March, 2014 and published in the ISTSS 2014 Special Issue in Fire Technology.
